

■ Initiatives of ODA CHIKUSAN

The reliable taste made by cooperation between different regions. We fatten calves from Amami islands and Okinawa in Kagoshima.

We fatten black Wagyu born in Amami islands and Okinawa at our Oda farm in Minamisatsuma city, Kagoshima Prefecture to maintain high quality and stable production. We hope the local people will enjoy Odagyu born in those islands and raised in Kagoshima again. We contribute to preserve and cultivate food culture, and accomplish homecoming of tastiness.

 2016 Number of Breeding 4,558

Cultivating good, tasty crops with healthy soil

"High-efficiency compost"

Manure compost of ODAGYU raised with safe and secure feed. This is high quality well aged organic feed which contains GRAS* strain made of microorganisms with excellent decomposing ability. The compost restores the original healthy soil and promotes production of high quality and good taste agricultural crops.

- Feedstock: Manure compost (bleaching / sawdust)
- Details of major components as content level (breeded in 2014)

Nitrogen 2.5% Carbon-Nitrogen ratio (C/N ratio) 16.09%
 Phosphorus 0.2% pH 7.4% Potassium 3.6% EC 6.8%
 Germination rate 100% Spray Quantity: 2 tons per 10a

*GRAS is the safety standard certificate for food additives granted by United States Food and Drug Administration, FDA
